Frame edge

The U-shaped aluminium edge forms the perimeter frame and door support. It must be placed against undecorated brickwork and secured with mortar. The ends of the frame edges are at 45° and joined together with die-cast brackets.

Finish: raw aluminium

Glass-stop edge

The glass-stop edges are used to fix the glass panels and seals. They must be placed in the frame when the brickwork is finished (smoothed, painted and covering and flooring in place).

Standard finish: polished aluminium

Finish on request: brushed polished aluminium.

The glass-stop edges cover the joints, hiding any cracks that may have formed between the frame and the wall.

The glass-stop edges can also follow and hide slightly uneven coverings or smoothing.

**Toughened glass panels**

Standard finish: transparent float

Finish on request: super-clear, acid etched, birain, smoked, etc.

Thickness: 8mm up to a height of 220cm.

10mm for heights above 220cm and up to a maximum of 250cm.

Hinges

Locking hinge, glass-on-glass type at 180° with 90° opening

Standard finish: shiny chrome

Finish on request: brushed chrome

Number of hinges: 2 hinges up to a height of 210cm
3 hinges over heights of 210cm

Handle

Outside handle in Plexiglass with stainless steel knobs. Inner knob in wood for the sauna door and stainless steel knob for the Hammam door.

Seals

Glass doors and panels have silicone and PVC seals.

Applications

HAMMAM section

SAUNA section without platform
